

STS-120

The mission of the STS-120 Shuttle was the maiden flight in space of the Italian astronaut Paolo Nespoli.

This mission also concerned the transportation into the orbit of NODO2, a technological masterpiece by Italian industries; its setting up and functioning, by docking it to ISS space station allowed the following widening with other specialized modules, provided by the other participant partners to the ISS project.

The book, A4 format paper as the former one, is made from 202 pages and retraces the whole mission day after day; rich in colored pictures and a lot of schemes, it retraces all the steps from the first preparation operations.
